Re: City of Cape Coral
Municipal General Employees' Retirement Plan

Dear Bob:

We are pleased to present to the Board this report of the annual actuarial valuation of the City of Cape Coral Municipal General Employees' Retirement Plan. The valuation was performed to determine whether the assets and contributions are sufficient to provide the prescribed benefits and to develop the appropriate funding requirements for the applicable plan year. Please note that this valuation may not be applicable for any other purposes.

The valuation has been conducted in accordance with generally accepted actuarial principles and practices, including the applicable Actuarial Standards of Practice as issued by the Actuarial Standards Board, and reflects laws and regulations issued to date pursuant to the provisions of Chapter 112, Florida Statutes, as well as applicable federal laws and regulations. In our opinion, the assumptions used in this valuation, as adopted by the Board of Trustees, represent reasonable expectations of anticipated plan experience. Future actuarial measurements may differ significantly from the current measurements presented in this report for a variety of reasons including: changes in applicable laws, changes in plan provisions, changes in assumptions, or plan experience differing from expectations.

In conducting the valuation, we have relied on personnel, plan design, and asset information supplied by the Board of Trustees, financial reports prepared by the custodian bank, and the actuarial assumptions and methods described in the Actuarial Assumptions section of this report. While we cannot verify the accuracy of all this information, the supplied information was reviewed for consistency and reasonableness. As a result of this review, we have no reason to doubt the substantial accuracy of the information and believe that it has produced appropriate results. This information, along with any adjustments or modifications, is summarized in various sections of this report.

The undersigned is familiar with the immediate and long-term aspects of pension valuations and meets the Qualification Standards of the American Academy of Actuaries necessary to render the actuarial opinions contained herein. All of the sections of this report are considered an integral part of the actuarial opinions.

To our knowledge, no associate of Foster & Foster, Inc. working on valuations of the program has any direct financial interest or indirect material interest in the City of Cape Coral, nor does anyone at Foster & Foster, Inc. act as a member of the Board of Trustees of the City of Cape Coral Municipal General Employees' Retirement Plan. SUMMARY OF REPORT

The regular annual actuarial valuation of the City of Cape Coral Municipal General Employees' Retirement Plan, performed as of October 1, 2016, has been completed, and the results are presented in this Report. The results of this valuation are applicable to the plan/fiscal year ended September 30, 2018.

The funding requirements, compared with amounts developed in the October 1, 2015 actuarial valuation, are as follows:

Valuation Date Applicable to Plan/Fiscal Year Ending	10/1/2016 <u>9/30/2018</u>	10/1/2015 <u>9/30/2017</u>
Total Required Contribution	\$25,200,650	\$23,142,947
Member Contributions (Est.)	4,523,867	4,397,929
Balance From City ¹	20,676,783	18,745,018

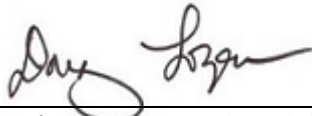

¹ Please note that the City has a shortfall contribution of \$248,060.68 due in addition to the amounts described above. The Member Contributions for fiscal 2018 are estimated based on the Buy Up elections. The City's required contribution is the amount shown on the "Balance From City" line regardless of the Member Contributions actually made. The effective Member Contribution rate will vary each year as new Members enter and Members electing the Buy Up leave the plan.

During the past year, the actuarial experience has been less favorable than expected on the basis of the actuarial assumptions. The primary sources of loss were unfavorable turnover and retirement experience, as well as a 7.38% investment return (Actuarial Asset Basis) that fell short of the 7.75% assumption. These losses were offset slightly by favorable salary increase experience.

The balance of this Report presents additional details of the actuarial valuation and the general operation of the Fund. The undersigned would be pleased to meet with the Board of Trustees in order to discuss the Report and answer any pending questions concerning its contents.

Respectfully submitted,

FOSTER & FOSTER, INC.

STATEMENT BY ENROLLED ACTUARY

This actuarial valuation was prepared and completed by me or under my direct supervision, and I acknowledge responsibility for the results. To the best of my knowledge, the results are complete and accurate, and in my opinion, the techniques and assumptions used are reasonable and meet the requirements and intent of Part VII, Chapter 112, Florida Statutes. There is no benefit or expense to be provided by the plan and/or paid from the plan's assets for which liabilities or current costs have not been established or otherwise taken into account in the valuation. All known events or trends which may require a material increase in plan costs or required contribution rates have been taken into account in the valuation.

Early Retirement

Commencing upon eligibility for Early Retirement, Members are assumed to retire with an immediate benefit at the rate of 2.00% per year.

Interest Rate

7.75% per year, compounded annually, net of investment expenses. This assumption is supported by the Plan's investment policy and long-term expected returns by asset class.

Salary Increases

<u>Age</u>	<u>Credited Service</u>	<u>Assumption</u>
All	less than 20 years	7.00%
under age 50	20 or more years	5.80%
50-59	20 or more years	5.30%

1.14% per year (2.08% used for 10/1/2015).

Administrative Expenses

\$178,584 based on the prior year's expense.

Asset Valuation Method

Each year, the prior Actuarial Value of Assets is brought forward utilizing the historical geometric 4-year average Market Value return. It is possible that over time this technique will produce an insignificant bias above or below Market Value.

Funding Method

Entry Age Normal Actuarial Cost Method. The following loads are applied for determination of the Sponsor funding requirement:

Interest – half a year based on the 7.75% assumption.

Salary – a full year based on the current average assumption of 6.85%.

GLOSSARY

Total Annual Payroll is the projected annual rate of pay as of the valuation date of all Covered Members.

Present Value of Benefits is the single sum value on the valuation date of all future benefits to be paid to current Members, Retirees, Beneficiaries, Disability Retirees and Vested Terminations.

Normal (Current Year's) Cost is determined for each participant as the present value of future benefits, determined as of the Member's entry age, amortized as a level percentage of compensation over the anticipated number of years of participation, determined as of the entry age.

Individual Entry Age Normal Actuarial Cost Method (Level Percent of Compensation) is the method used to determine required contributions under the Plan. The use of this method involves the systematic funding of the Normal Cost (described above) and the Unfunded Accrued (Past Service) Liability. The actuarial accrued liability for active participants is the difference between the present value of future benefits and the present value of future Normal Costs. The actuarial accrued liability for inactive participants is the present value of future benefits.

Unfunded Actuarial Accrued Liability (UAAL) is the difference between the actuarial accrued liability (described above) and the actuarial value of assets. Under the Entry Age Normal Actuarial Cost Method, an actuarial gain or loss, based on actual versus expected UAAL, is determined in conjunction with each valuation of the plan.

Total Required Contribution is equal to the Normal Cost plus an amount sufficient to amortize the Unfunded Accrued Liability over no more than 30 years. The required amount is adjusted for interest according to the timing of contributions during the year.

Investments*Investment Policy:*

The following was the Board's adopted asset allocation policy as of September 30, 2016:

<u>Asset Class</u>	<u>Target Allocation</u>
US Equity	32%
Developed Non US Equity	10%
Emerging Market Equity	8%
US Core Fixed Income	20%

<u>Total</u>	<u>100%</u>

Concentrations:

The Plan did not hold investments in any one organization that represent 5 percent or more of the Pension Plan's Fiduciary Net Position.

Rate of Return:

For the year ended September 30, 2016, the annual money-weighted rate of return on Pension Plan investments, net of Pension Plan investment expense, was 8.66 percent.

The money-weighted rate of return expresses investment performance, net of investment expense, adjusted for the changing amounts actually invested.

Participation: Not to exceed 60 months.

At Member's election:

Members may elect to change form of return 2 times during each 12 month period of DROP participation.

The DROP balance as September 30, 2016 is \$13,339,026.

NET PENSION LIABILITY OF THE SPONSOR

The components of the Net Pension Liability of the Sponsor on September 30, 2016 were as follows:

Total Pension Liability	\$ 303,869,461
Plan Fiduciary Net Position	\$ (224,525,234)
Sponsor's Net Pension Liability	<u>\$ 79,344,227</u>
Plan Fiduciary Net Position as a percentage of Total Pension Liability	73.89%

Actuarial Assumptions:

The Total Pension Liability was determined by an actuarial valuation as of October 1, 2015 updated to September 30, 2016 using the following actuarial assumptions:

Inflation	2.00%
Salary Increases	5.00% - 7.00%
Discount Rate	7.75%
Investment Rate of Return	7.75%

Mortality Rate Healthy Lives:

Mortality Table - RP2000 Fully Generational with Scale BB, with collar and annuitant adjustments as follows:

Males – 50% Annuitant White Collar, 50% Annuitant Blue Collar.

Females – 100% Annuitant White Collar.

Mortality Rate Disabled Lives:

Mortality Table - RP2000 without projection, with the following adjustments:

Males – 100% Disabled Male with four year setback

Females – 100% Disabled Female with two year set forward.

The most recent actuarial experience study used to review the other significant assumptions was dated July 25, 2011.

The Long-Term Expected Rate of Return on Pension Plan investments was determined using a building-block method in which best-estimate ranges of expected future real rates of return (expected returns, net of Pension Plan investment expenses and inflation) are developed for each major asset class.

For 2016 the inflation rate assumption of the investment advisor was 2.00%.

These ranges are combined to produce the Long-Term Expected Rate of Return by weighting the expected future real rates of return by the target asset allocation percentage and by adding expected inflation.

Best estimates of arithmetic real rates of return for each major asset class included in the Pension Plan's target asset allocation as of September 30, 2016 are summarized in the following table:

Asset Class	Long Term Expected Real Rate of Return
US Equity	6.62%
Developed Non US Equity	7.30%
Emerging Market Equity	9.66%
US Core Fixed Income	1.72%
Hedge Fund of Funds	3.68%
Real Estate	4.46%
Private Equity	11.27%
Farmland	6.72%

Discount Rate:
The Discount Rate used to measure the Total Pension Liability was 7.75 percent.
The projection of cash flows used to determine the Discount Rate assumed that Plan Member contributions will be made at the current contribution rate and that Sponsor contributions will be made at rates equal to the difference between actuarially determined contribution rates and the Member rate. Based on those assumptions, the Pension Plan's Fiduciary Net Position was projected to be available to make all projected future benefit payments of current plan members. Therefore, the Long-Term Expected Rate of Return on Pension Plan investments was applied to all periods of projected benefit payments to determine the Total Pension Liability.

Net Pension Liability

The measurement date is September 30, 2016.

The measurement period for the pension expense was October 1, 2015 to September 30, 2016.

The reporting period is October 1, 2015 through September 30, 2016.

The Sponsor's Net Pension Liability was measured as of September 30, 2016.

The Total Pension Liability used to calculate the Net Pension Liability was determined as of that date.

Actuarial Assumptions:

The Total Pension Liability was determined by an actuarial valuation as of October 1, 2015 updated to September 30, 2016 using the following actuarial assumptions:

Inflation	2.00%
Salary Increases	5.00% - 7.00%
Discount Rate	7.75%
Investment Rate of Return	7.75%

Mortality Rate Healthy Lives:

Mortality Table - RP2000 Fully Generational with Scale BB, with collar and annuitant adjustments as follows:

Males – 50% Annuitant White Collar, 50% Annuitant Blue Collar.

Females – 100% Annuitant White Collar.

Mortality Rate Disabled Lives:

Mortality Table - RP2000 without projection, with the following adjustments:

Males – 100% Disabled Male with four year setback

The most recent actuarial experience study used to review the other significant assumptions was dated July 25, 2011.

The Long-Term Expected Rate of Return on Pension Plan investments was determined using a building-block method in which best-estimate ranges of expected future real rates of return (expected returns, Net of Pension Plan investment expenses and inflation) are developed for each major asset class.

For 2016 the inflation rate assumption of the investment advisor was 2.00%.

These ranges are combined to produce the Long-Term Expected Rate of Return by weighting the expected future real rates of return by the target asset allocation percentage and by adding expected inflation.

Best estimates of arithmetic real rates of return for each major asset class included in the Pension Plan's target asset allocation as of September 30, 2016 are summarized in the following table:

Asset Class	Target Allocation	Long Term Expected Real Rate of Return
US Equity	32%	6.62%
Developed Non US Equity	10%	7.30%
Emerging Market Equity	8%	9.66%
US Core Fixed Income	20%	1.72%
Hedge Fund of Funds	8%	3.68%
Real Estate	12%	4.46%
Private Equity	5%	11.27%
Total	100%	

Discount Rate:

The Discount Rate used to measure the Total Pension Liability was 7.75 percent.

The projection of cash flows used to determine the Discount Rate assumed that Plan Member contributions will be made at the current contribution rate and that Sponsor contributions will be made at rates equal to the difference between actuarially determined contribution rates and the Member rate. Based on those assumptions, the Pension Plan's Fiduciary Net Position was projected to be available to make all projected future benefit payments of current plan members. Therefore, the Long-Term Expected Rate of Return on Pension Plan investments was applied to all periods of projected benefit payments to determine the Total Pension Liability.
