**Hinsdale Police Department  
Training Summary  
June 2014**

On Tuesday, June 3, 2014, Chief Bradley Bloom, Detective Sergeant Erik Bernholdt, Sergeant Stephen Cogger, Sergeant Steven Ruban, Deputy Chief Kevin Simpson and Deputy Chief Mark Wodka attended **Bulletproof Leadership**. Motivational leadership speaker and trainer Chief Ron Glidden (Ret.) gave our leadership team the tools needed to handle morale-killers, performance-zappers, and more at his inspiring one day Bulletproof Leadership seminar. This seminar targeted the specific behaviors that sabotage day-to-day operations, including: low morale, co-worker conflict, negative interactions with the public, sick-time abuse, and poor performance.

On Tuesday, June 3, 2014, Officers Louis Hayes and Thomas Lillie attended **FIAT Training**.

On Wednesday, June 4, 2014, Officer Louis Hayes attended **Foundations of Mentoring**. This class focused on the development realm and equipped mentors to effectively encourage and guide protégés as they grow through their own challenging experiences.

From Monday, June 9, 2014 to Friday, June 13, 2014, Officer Louis Hayes attended **Field Training Officer (Sokolove Model)**.

From Wednesday, June 11, 2014 to Friday, June 13, 2014, Crime Prevention Officer Michael Coughlin attended **IJOA and IDOA State Training Conference**.

On Tuesday, June 17, 2014, Officers Thomas Lillie and Louis Hayes attended **FIAT Training**.

On Wednesday, June 18, 2014, Detective Kevin Susmarski and Officer Thomas Krefft attended **Older Adults and Adults with Disabilities Protocol Training for First Responders**.

From Monday, June 23, 2014 to Friday, June 27, 2014, Detective Sergeant Erik Bernholdt attended the **21st Annual Advanced Homicide Investigation Conference**, hosted by the New Jersey State Police on the campus of Princeton University. The conference is designed to meet the needs of investigators and supervisors tasked with the investigation of homicides, suicides and unnatural deaths. Topics of discussion included gunshot wounds, cutting wounds, blunt force wounds, infant death, interview and interrogation, leadership and decision making in homicide investigations, media relations, police-involved shootings, and the behavioral analysis of homicide investigation, as well as major case studies. Funding for this training was provided by FIAT, which Sergeant Bernholdt oversees as the FIAT Major Case Unit Commander.

From Wednesday, June 25, 2014 to Friday, June 27, 2014, School Resource Officer Mark Keller attended **Illinois School Resource Officers Association**. Topics included lessons learned from responding to a school crisis, computer crimes investigations, and autism and law enforcement.

# Manual on Uniform Traffic Control Devices Warrants

June 2014

The following warrants should be met prior to installation of a **two-way** stop sign:

1. Intersection of a less important road with a main road where application of the normal right-of-way rule would not be expected to provide reasonable compliance with the law;
2. Street entering a through highway or street;
3. Unsignalized intersection in a signalized area; and/or
4. High speeds, restricted view, or crash records indicate a need for control by the STOP sign (defined by 5 or more collisions within a 12-month period).

The following warrants should be met prior to the installation of a **Multiway** stop sign:

1. Where traffic control signals are justified, the multiway stop is an interim measure that can be installed quickly to control traffic while arrangements are being made for the installation of the traffic control signal.
2. A crash problem, as indicated by 5 or more reported crashes in a 12-month period, that is susceptible to correction by a multiway stop installation. Such crashes include right-turn and left-turn collisions as well as right-angle collisions.
3. Minimum volumes:
  - a. The vehicular volume entering the intersection from the major street approaches (total of both approaches) averages at least 300 vehicles per hour for any 8 hours of an average day, and
  - b. The combined vehicular, pedestrian, and bicycle volume entering the intersection from the minor street approaches (total of both approaches) averages at least 200 units per hour for the same 8 hours, with an average delay to minor-street vehicular traffic of at least 30 seconds per vehicle during the highest hour, but
  - c. If the 85th-percentile approach speed of the major-street traffic exceeds 65 km/h or exceeds 40 mph, the minimum vehicular volume warrants are 70 percent of the above values.
4. Where no single criterion is satisfied, but where Criteria 2, 3.a, and 3.b are all satisfied to 80 percent of the minimum values. Criterion 3.c is excluded from this condition.

### **Option:**

Other criteria that may be considered in an engineering study include:

1. The need to control left-turn conflicts;
2. The need to control vehicle/pedestrian conflicts near locations that generate high-pedestrian volumes;
3. Locations where a road user, after stopping, cannot see conflicting traffic and is not able to reasonably safely negotiate the intersection unless conflicting cross traffic is also required to stop; and
4. An intersection of two residential neighborhood collector (through) streets of similar design and operating characteristics where multiway stop control would improve traffic operational characteristics of the intersection.

The following warrants must be met prior to the installation of a **Yield** sign:

1. On a minor road at the entrance to an intersection where it is necessary to assign right-of-way to the major road, but where a stop sign is not necessary at all times, and where the safe approach speed on the minor road exceeds 10 miles per hour;
2. On the entrance ramp to an expressway where an acceleration ramp is not provided;
3. Within an intersection with a divided highway, where a STOP sign is present at the entrance to the first roadway and further control is necessary at the entrance between the two roadways, and where the median width between the acceleration lane; and
4. At an intersection where a special problem exists and where an engineering study indicates the problem to be susceptible to correction by use of the YIELD sign.
